Appl. No.: 09/482,888 Art Group Unit 2853 January 9, 2002 Page 3

In rejecting claims 1-6 of the present application, the Examiner states that the Moynihan et al. patent discloses an inkjet printer comprising a channel plate (Fig. 8, element 87) made of silicon (column 4, lines 9-15) having a plurality of ink channels etched into at least one surface thereof (89, 91); associated actuators (87), means defining an ink reservoir (86) communicating with the ink channels, the reservoir being defined by a base member (85) made of a material different than that of the channel plate, wherein the channel plate is adhesively fixed to the base member (column 6, lines 4-7), and wherein the base member (85) forms a support plate sandwich between two separate channel plates (87, 88).

It is believed that the Examiner's attempted analogy between the structure of the reference patent and that of the present invention is clearly erroneous. Thus, for example, the Examiner alleges that the reference patent discloses that in Figure 8, element 87 is a channel plate. Element 87 is not a channel plate, but rather is a piezoelectric plate. Please see in this regard, column 7, line 48 of the reference patent. Thus, in the reference patent in Figure 8 thereof, the channel plate is indicated with reference numeral 85 (the base plate) and this plate contains the pressure channels 86. Accordingly, the reference patent does not disclose or suggest a base member in cooperation with a channel plate and accordingly cannot possibly suggest the present invention. Since the structure of the reference patent is not the same as the

Appl. No.: 09/482,888 Art Group Unit 2853 January 9, 2002

Page 4

structure of the present invention, the component parts of the structure of the

reference patent cannot possibly cooperate in the same manner as the

component parts of the structure of the present invention.

Accordingly, the present invention is not anticipated by or rendered

obvious over the teachings of the Moynihan et al. patent.

Claim 7 has been rejected by the Examiner under 35 U.S.C. § 102(e) as

being anticipated by Yamamoto et al. (U.S. Patent 6,036,303). This rejection is

respectfully traversed.

As the Examiner will note, claim 7 has been amended so as to

specifically recite a method of manufacturing an inkjet printhead having the

structure recited in claim 1. The Yamamoto et al. reference is concerned with

an inkjet recording head for reducing cross-talk and accordingly cannot

possibly contemplate a method of manufacturing an inkjet printhead having

the specific structure as recited in amended claim 7 of the present application.

Accordingly, it is believed that claim 7, as amended, clearly distinguishes

the method of manufacturing the inkjet printhead of the present invention from

the inkjet recording head for reducing cross-talk as defined by the Yamamoto

et al. patent.

In view of the above amendments and remarks, reconsideration of the

rejections and allowance of the claims of the present application are

respectfully requested.

Appl. No.: 09/482,888 Art Group Unit 2853 January 9, 2002 Page 5

Conclusion

Attached hereto is a marked-up version of the changes made to the

application by this Amendment.

In the event there are any matters remaining in this application, the

Examiner is invited to contact Mr. Joseph A. Kolasch, Registration No. 22,463

at (703) 205-8000 in the Washington, D.C. area.

Pursuant to the provisions of 37 C.F.R. §§ 1.17 and 1.136(a), the

Applicant respectfully petitions for a two (2) month extension of time for filing a

response in connection with the present application and the required fee of

\$400.00 is attached hereto.

If necessary, the Commissioner is hereby authorized in this, concurrent,

and future replies, to charge payment or credit any overpayment to Deposit

Account No. 02-2448 for any additional fees required under 37 C.F.R. §§1.16 or

1.17; particularly, extension of time fees.

Respectfully submitted,

BIRCH, STEWART, KOLASCH & BIRCH, LLP

Enclosure: Marked Up Version of Claim Amendments

MARKED UP VERSION OF CLAIM AMENDMENTS

IN THE CLAIMS

Please amend the claims to read as follows:

7. (Amended) A method of manufacturing an ink jet printhead [having] which comprises:

providing a channel plate <u>having etched into</u> [provided on] at least one surface [with] <u>thereof</u> a plurality of ink channels,

[a flexible sheet for]

covering the open sides of the ink channels with flexible sheet,

providing an ink reservoir for communicating with the ink channels, said ink reservoir being defined by a base member made of a material different from that of the channel plate,

[and] <u>providing</u> an actuator block [forming] <u>which forms</u> a plurality of actuators, <u>and</u>

operatively associating said actuators with each of the ink channels for pressurizing ink contained therein,

[which comprises assembling] wherein the channel plate, the flexible sheet and the actuator block together to form a unit which is then fitted to [a] the base member.
